PROFILE

Final-semester Master of Data Science student at Adelaide University, graduating December 2026. I am strongest in SQL and statistical analysis, and I enjoy the part of the job where messy data has to be cleaned up and turned into something a business can act on. I am currently Scrum Master on an industry capstone project, so I am used to delivering to a real client rather than a marking rubric. Available for part-time or casual work now (up to 24 hours a week), with full working rights from early 2027.

PROJECTS

AI-Powered Startup Assessment Platform

Aug 2026 - Nov 2026

Master of Data Science capstone, built for an industry partner

- Building a web platform where startup founders upload a pitch deck or business plan and get back a written assessment and a readiness score, based on the criteria an investor would apply by hand.
- **Scrum Master** for a team of five. I plan the sprints in Jira and help run the weekly client meeting.
- I build the part that reads the uploaded files, taking PDFs, slide decks and plain text and pulling out the sections and figures the scoring step needs. Every founder writes their documents differently, so there is no fixed layout to rely on.
- Working to a client brief means the scope moves and finishing on time matters more than making it perfect. Final delivery November 2026.

E-Commerce Sales and Delivery Analysis (SQL)

2026

100,000 real marketplace orders, analysed end to end

- Built a MySQL database from scratch and loaded over 500,000 rows, cleaning out blank dates, hidden characters left by Windows CSV files, and incomplete months that made growth look like +697,878%.
- Wrote 16 queries using CTEs and window functions (LAG, LEAD, ROW_NUMBER, RANK, NTILE) to look at revenue, delivery times, reviews and repeat customers.
- Found that a late delivery makes a 1-2 star review about six times more likely (2.57 stars against 4.29), and that only 3.1% of customers ever ordered again. Together these explained a revenue plateau the raw monthly figures hid completely.
- Rebuilt the findings as a Power BI dashboard that flags which states to act on first, rather than just showing the numbers. Code on GitHub, full write-up on Medium.

TECHNICAL SKILLS

- **SQL:** database design, multi-table joins, CTEs and window functions (MySQL 8).
- **R:** cleaning, wrangling, visualisation and predictive modelling.
- **Statistics:** hypothesis testing, multivariable modelling, and checking that the assumptions actually hold.
- **Machine Learning:** classification, regression, K-Means clustering, model evaluation and tuning.
- **Python:** data preparation, machine learning pipelines and FastAPI backends.
- **Power BI:** DAX measures, Power Query, and dashboards built around what a manager needs to act on.

WORK EXPERIENCE

Team Member - Woolworths, Seaford SA

Sep 2025 - Present

- Serve customers in a busy retail environment, working closely with a varied team.
- Named **Best Team Member** for reliability and the way I work with customers and colleagues.

VOLUNTEERING

Event Assistant - AU Space Society, Adelaide University

Feb 2025 - Present

- Help run events and workshops, including promotional stalls that bring new students into the society.

Craft Assistant - O'Week 2026, Adelaide University

Feb 2026

- Welcomed new students, answered their questions and helped run activities.

EDUCATION

Master of Data Science - Adelaide University

Jan 2025 - Dec 2026

Bachelor of Electronics and Communication - Anna University

Jul 2020 - Jun 2024
