PROFILE SUMMARY

Final-semester Master of Data Science student at Adelaide University, graduating December 2026. Available for part-time or casual analytical work now (up to 24 hrs/week), with unrestricted full-time rights from early 2027. Strong foundation in SQL, R and statistical analysis, with hands-on experience in database design, predictive modelling and turning messy real-world data into business insight.

PROJECTS

LLM-based eCommerce Application

2026

- Built three LLM agents for an online cell phone store: advertisement generation, product recommendation and customer review analysis.
- Applied BLIP2, Qwen2-VL, TableLLM-7B and Qwen3 across the three agents, combining multimodal image processing with tabular and sentiment reasoning.
- Achieved 88% accuracy and 87.51% F1 score classifying 67,986 customer reviews, generating actionable business insights and product improvement suggestions.

E-Commerce Sales & Delivery Analysis (SQL)

2026

- Designed a MySQL database and loaded 500k+ rows from a real 100,000-order marketplace dataset, handling NULLs, malformed encodings and partial-period artifacts during data cleaning.
- Wrote 16 analytical queries using CTEs and window functions (LAG, LEAD, ROW_NUMBER, RANK, NTILE) to investigate revenue trends, delivery performance, reviews and retention.
- Surfaced that late deliveries make a 1–2 star review roughly 6x more likely (2.57 vs 4.29 avg stars) and that a 3.1% repeat-purchase rate explained a revenue plateau hidden in raw figures; published full write-up on Medium and code on GitHub.

TECHNICAL SKILLS

- SQL:** database design, multi-table joins, CTEs and window functions for analytical querying (MySQL).
- R:** data wrangling, cleaning, visualisation and predictive modelling, end to end.
- Statistical Analysis:** hypothesis testing, multivariable modelling and distributional assumptions.
- Machine Learning:** supervised learning for classification and regression, K-Means clustering, model evaluation and tuning.
- Python:** data preprocessing, machine learning pipelines and FastAPI web backends.
- Power BI:** interactive dashboards and business insights.

WORK EXPERIENCE

Team Member, Woolworths – Seaford, SA

Sep 2025 – Present

- Provide customer service in a fast-paced retail environment, building communication, teamwork and problem-solving skills with diverse customers and colleagues.

VOLUNTEERING

Event Assistant, AU Space Society – Adelaide University

Feb 2025 – Present

- Help organise events and workshops, including promotional stalls that engage students and grow society participation.

Craft Assistant, O'Week 2026 – Adelaide University

Feb 2026

- Welcomed and guided new students during O'Week, answering queries and supporting activities.

EDUCATION

Master of Data Science, Adelaide University

Jan 2025 – Dec 2026

Bachelor of Electronics and Communication, Anna University

Jul 2020 – Jun 2024
